Standarder får världen att fungera

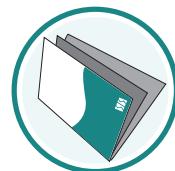

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befäster handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviseras din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verlig nytt och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Europastandarden EN 12954:2019 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av EN 12954:2019.

Denna standard ersätter SS-EN 12954, utgåva 1.

The European Standard EN 12954:2019 has the status of a Swedish Standard. This document contains the official version of EN 12954:2019.

This standard supersedes the SS-EN 12954, edition 1.

English Version

General principles of cathodic protection of buried or
immersed onshore metallic structures

Principes généraux de la protection cathodique des
structures métalliques à terre enterrées ou immergées

Grundlagen des kathodischen Korrosionsschutzes von
metallenen Anlagen in Böden und Wässern

This European Standard was approved by CEN on 28 July 2019.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN 12954:2019) has been prepared by Technical Committee CEN/TC 219 "Cathodic protection", the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by February 2020, and conflicting national standards shall be withdrawn at the latest by February 2020.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 12954:2001.

This document describes general principles for applying external cathodic protection on onshore metallic structures in contact with soils, fresh surface waters or underground waters, except those which are embedded in concrete and those which are in sea-waters or brackish waters.

This edition of EN 12954 does not cover specific applications for on-land pipelines.

NOTE On-land pipeline applications is now completely covered by EN ISO 15589-1 [1].

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

Cathodic protection is a technique based on the application of electrochemical principles. It is achieved by the supply of sufficient direct current to the external surface, such that the metallic structure-to-electrolyte potential is shifted to more negative values where external corrosion becomes insignificant. Cathodic protection covers a wide range of materials and equipment and requires a variety of measurement techniques.

This document is applicable to the protection of external surfaces of all types of buried or immersed metallic structures. However, in order to allow for structures having specific features with regards to shape, use, detailed configuration, construction, commissioning or operation, provision has been made for complementary standards to be used in conjunction with this one to deal with the peculiarities of such structures.

To achieve effective cathodic protection design installation, commissioning, inspection and maintenance it is essential that the works are performed by competent personnel.

This document specifies conditions necessary to consider cathodic protection as an efficient method which can be applied to mitigate corrosion. It is normally used in combination with a coating.

Alternative solutions to those provided in this standard may be applied if it is demonstrated that they give equivalent effectiveness and they are well documented.

1 Scope

This document describes the general principles for the implementation and management of a system of cathodic protection against corrosive attacks on structures which are buried or in contact with soils, surface fresh waters or underground waters, with and without the interference of external electrical sources. It specifies the protection criteria to be achieved to demonstrate the cathodic protection effectiveness.

For structures that cannot be electrically isolated from neighbouring influencing structures, it may be impossible to use the criteria defined in the present document. In this case, EN 14505 will be applied (see 9.4 "Electrical continuity/discontinuity").

NOTE To assist in forming a decision whether or not to apply cathodic protection the corrosion likelihood can be evaluated using informative Annex A which summarizes the requirements of EN 12501-1 [2] and EN 12501-2 [3].

Cathodic protection of structures immersed in seawater or brackish waters is covered by EN 12473 and a series of standards more specific for various applications.

Cathodic protection for reinforced concrete structures is covered by EN ISO 12696.

This document is applicable in conjunction with:

- EN ISO 15589-1 for application for buried or immersed cathodically protected pipelines,
- EN 50162 to manage d.c. stray currents,
- EN ISO 18086 to manage corrosion due to a.c. interference from high voltage power sources and a.c. traction systems,
- EN 13509 for cathodic protection measurement techniques
- EN 50443 to manage protection for touch and step voltage.

2 Normative references
